

Utilizing Data for Continuous Quality Improvement

Identify the prevalence and impact of different types of substance misuse:

- On clients served by DHHS
- On particular populations
- In various areas of the state

To assist DHHS program areas utilizing data to:

- Evaluate contractor performance
- Track client outcomes
- Improve Program quality and effectiveness

That Identifies coexisting health and social conditions that may be perpetuating the misuse of alcohol and drugs and collectively exacerbating many of the client issues being addressed by DHHS program areas.

To assist DHHS program areas in:

- Identifying evaluation methodologies
- Identifying and monitoring elements of policies, strategies and programming that are critically important to service quality and outcomes
